A Word from Debbie Hart, President & CEO, BioNJ

Jersey Strong. I am sure all of us have been inspired by the commercials touting the strength of New Jersey as we recover from Hurricane Sandy.

And it occurred to me just how much that phrase rings true. New Jersey is strong. We're strong because our citizens are strong, our core industries, including the life sciences are strong, and our leadership is strong. Jersey Strong.

And it's important to remind oneself and everyone else in the world about those attributes every once in a while.

With that in mind, I would like to report on:

- The depth of skill, knowledge and experience of the speakers and attendees who will "*Take It to the Top*" at our Inaugural CEO Summit on October 4 in Bridgewater.
- The strong support the New Jersey life science industry continues to receive from our elected representatives.
- Progress in advancing our Patient Advocacy initiative.
- Spreading the "Good News" about New Jersey and the life sciences in New Jersey.

Take It to the Top

It's more than just a phrase when we say that our Inaugural CEO Summit will *Take It to the Top*.

Starting with a 100 percent commitment from the BioNJ Board of Trustees, top-level speakers, innovative panels, company presentations and a long and growing list of Executive Suite Sponsors, the CEO Summit breaks new ground for BioNJ as we bring together C-Suite Executives from throughout New Jersey and beyond.

From its inception, the singular goal of BioNJ has been to help advance the many facets of biotechnology - research and development, business development, supportive public policies - and in panels with intriguing titles such as "Inside Outsourcing" and "In the Trenches with Tranches, Financing Strategies for Growth," the CEO Summit is on target to enhance our efforts and take its place alongside the Annual Dinner Meeting, Awards Program and Networking Event and the International BioPartnering Conference as a BioNJ Trademark Event.

MEMBER PROFILE

Located at Rutgers, The State University of New Jersey, RUCDR Infinite Biologics is the world's largest university-based biorepository providing comprehensive biobanking and genomic solutions. RUCDR offers a variety of bioprocessing and biobanking services to government agencies, academic institutions, foundations, biotechnology and pharmaceutical companies ranging from clinical trial management services to biosample processing and analysis, and culminating in a wide-range of secure biological sample storage options from room temperature to liquid nitrogen. RUCDR provides clients with flexible and customizable solutions utilizing cutting-edge technologies to advance the discovery process. Our scientific approach to all projects helps identify variables to ensure a robust validation process for quality assurance and control, thus preventing costly downstream analyses with low-quality samples. RUCDR methodology maximizes the potential of every sample and enhances the value of all biological assets.
